

01

Sideglance

- Read between the lines.
- Context intelligence for the internet.
- Understand what people mean, not just what the words say.
- Live demo: cyrilla-mist.github.io/sideglance/

AI interpretation x deterministic grounding

03

Solution

- Capture: paste an Internet Moment.
- Context Gate: decide whether context is sufficient.
- If not, ask one minimum clarification question.
- Decode: explain tone, signals, confidence, evidence, and usage boundaries.

04

Context Gate

- First decision: should the system interpret at all?
- Ambiguity is a product state, not a failure to hide.
- Ask only for the evidence that can change the interpretation.
- No evidence, no strong claim.

05

Hero Demo

- Friday merge: "on a friday??" + "fearless behavior" + "enjoy your weekend".
- Literal reading: praise.
- Contextual reading: playful sarcasm shaped by developer culture and timing.
- Evidence stays attached to the explanation.

06

Technical Architecture

- Internet Moment -> Context Gate -> Context Interpreter -> EvidenceRef.
- EvidenceRef -> deterministic resolver -> grounding validation -> UI.
- Google Gemini handles context sufficiency and pragmatic interpretation.
- Principle: constrain probabilistic AI with deterministic product logic.

07

Engineering Quality

- 106 / 106 unit + integration checks PASS.
- 4 / 4 end-to-end flows PASS.
- Exact evidence grounding enforced.
- Invalid evidence or contracts fail safely.

08

Target Users & Impact

- Primary user: cross-cultural, internet-native, English-non-native participant.
- Reduce social misreads before users react or reply.
- Increase confidence in English-language internet participation.
- Turn contextual explanations into transferable intuition over time.

09

Roadmap

- NOW: Decode - understand this moment now.
- NEXT: Radar - build context instinct over time.
- LATER: more surfaces and communities, same evidence-first discipline.
- GitHub: github.com/cyrilla-mist/sideglance
